

## Toggle List & Card Grid View Using JS,ES5 & 6

Duration – 2weeks

The screenshot displays a web application interface with a dark blue background. At the top right, there are two toggle buttons: a 2x2 grid icon for the Card view and a horizontal bar icon for the List view. The Card view is currently active, showing three employee cards. Each card has a profile picture placeholder, a red 'X' delete button in the top right corner, and fields for Name, ID, Skills, Project, and HCM. The first card is for 'John', the second for 'Girl', and the third for 'Girl' with an input field for Skills. Below the cards is a table view showing the same data in a structured format. The table has columns for Name, ID, Skills, Project, HCM, and action buttons (edit and delete). The first two rows show 'John' and 'Girl' respectively, and the third row shows 'John' with an input field for Skills. The table also has a red 'X' delete button in the last column.

Name	ID	Skills	Project	HCM	
John	123456	React Js	CTS Internal	Alex	
John	123456	<input type="text"/>	CTS Internal	Alex	

### Functionality Overview

- Create a dynamic List and Card view Grid using HTML5, CSS3, JS, ES5, and ES6.
- Create a JSON file for Employee details. Minimum should be 10 Employee info.
- Use Ajax for fetch the data from JSON file.
- Edit the Skills and save it locally Or Use nodeJS to save the JSON file.
- Provide delete options.
- Change profile placeholder based on gender field.
- Toggle List and card view.

***\*\*Please do not use thrid Party Plugin/ library/ Modules for above Grid.***
